Function app deployment

Tuesday, May 28, 2024   6:11 PM

+ Function. contains two important pieces —
   your code, config file
                   ↳
                   function.json ( )
   It defines the fn trigger, bindings & other
   configuration settings.

* Every fn has 1 & only 1 trigger.

   Binding property mentions both triggers &
   bindings.

+ Function app provides an execution
   context in which your fn runs.
   All fn app share the same pricing
   plan, deployment method.

* Triggers have associated data, which is often
   provided as payload of fn.
